DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Sweden on July 09, 1999. It is noted, however, that applicant has not filed a certified copy of the Swedish application as required by 35 U.S.C. 119(b).

Election/Restrictions

Claims 34-35 are withdrawn from further consideration pursuant to 37 CFR
 1.142(b) as being drawn to a nonelected specie, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on May 24, 2004.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 18-20, 22-27 and 36 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Bleakley, US Patent No. 5,830,364.

Regarding claims 18-20, 22-27 and 36, Bleakley teaches a method of treatment of waste water from a pulp making plant by adding to the pulp slurry, carbon dioxide in amount sufficient to lower the pH of the slurry and to precipitate the detrimental susbstance(s) adhered to alkaline metal earth carbonate crystal, see abstract. The waste water contains inorganic and/or organic fines, including fillers, pigments, ink, latex, fiber fines, resins, etc, see column 3, line 55 through

Application/Control Number: 10/040,366

Art Unit: 1731

column 4, line 67, (claims 21-27). The water to be treated contains ions which form hydroxide, such as calcium and sodium hydroxides, see for example columns 7 and 8. Note also that papermaking waters are known to contain the metals ions as claimed, (claim 25). Bleakley teaches also that the coagulated /precipitated crystals can be used as pigment or fillers in the paper industry and that can be bleached to improve whiteness, column 8, line 40 through column 9, line 5. In example 1, column 9, lines Bleakley teaches that the carbon dioxide is added until the pH of the suspension falls below 8. Therefore, it seems that the reference, Bleakley, teaches all the elements of the claims 18-20, 22-27 and 36, or at least the minor modification to obtain the claimed invention would have been obvious to one of ordinary skill in the art.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 10/040,366

Art Unit: 1731

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 28-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bleakley cited above.

Bleakley teaches the reuse of the coagulated/precipitated crystals as fillers and/or pigments in the papermaking industry and teaches that the material can be bleached to improve whiteness, see column 8, lines 40-49. Bleakley is silent with respect to the bleaching steps or the use of peroxide. However, the process steps as claimed and the use of peroxide for bleaching is very well known in the art and considered to be within the levels of ordinary skill in the art, absent a showing of unexpected results. Note that one of ordinary skill in the art would have reasonable expectation of success if hydrogen peroxide is used as the bleaching agent as suggested by Bleakley.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure in the art of "Waste Water Treatment."
